

*Detail Note*

One of several F-102s flown by NACA and NASA over the years, F-102A-55-CO 56-0998 was built with the Case X ("Case Ten") wing. She was used by NASA at the Lewis Research Center on various test programs during the early 1970s. The pitot tube was striped red and white with a heat discolored tip. She carries a comm antenna and a rotating red anti-collision beacon on the tail, and has the barrier probe fairing and tail hook on the belly. Finish is semi-gloss aluminum paint with black trim.

*Don't Forget!*
